ÖZET

İnsanların hayatta deneyimledikleri tecrübeler zaman zaman baş etme becerilerinin üstesinden gelemeyeceği kadar karmaşık ve akıl sağlığı açısından insanları örseleyici olabilmektedir. Bu tecrübeler yaşamın farklı alanlarında karşımıza çıkmaktadır. Baş etme becerilerinin yetersiz kaldığı durumlarda insanlar bu durumdan genellikle olumsuz yönde etkilenirler. Bu etkilenmelerden biri de travma sonrası stres bozukluğudur. Travma sonrası stres bozukluğu kavramı çerçevesinde yükseköğretim kapsamında gerçekleştirilen lisansüstü tez çalışmalarında bazı akademik çalışmalar bu kapsamda gerçekleştirilmektedir. Bu çalışmanın amacı da travma sonrası stres bozukluğu konulu lisansüstü tez çalışmalarının lisansüstü düzey, yazım dili, tezlerin üretildiği üniversite, yayımlanan yıl, disiplinlere göre dağılımı gibi değişkenler aracılığı ile araştırılmasıdır. Çalışmada nitel araştırma yöntemi kullanılmıştır. Yükseköğretim Kurulu Tez Merkezinde yüklü bulunan tezlerden 380 adet tez içerik analizi yöntemi ile analiz edilmiştir. Tezler üretim yıllarına göre üçer yıllık dönemlere ayrılmıştır. Araştırma sonuçlarına göre Türkiye’de 1998 yılları ve 2024 yılları arasında travma sonrası stres bozukluğu konusunda en az tez 1998-2000 yılları arasında %1 ile dört tez yazılmış; en çok ise %42 ile 160 tez 2021-2024 yılları arasında yazılmıştır. Bu araştırmaya göre travma sonrası stres bozukluğu Türkiye’de 20. Yüzyılın sonunda akademik çalışmalara konu olmaya başlamıştır. Türkiye’deki 208 üniversitenin 92’sinde travma sonrası stres bozukluğu konulu tez çalışması yapılmış olup en çok tez 29 tez ile Sağlık Bilimleri Üniversitesinde (GATA dahil) üretilmiştir. En fazla sayıda tez yüksek lisans seviyesinde %57 ile yazılmış, en az yazılan tez derecesi %9 ile doktora düzeyindedir. Hem ruh sağlığının örselenmesi açısından hem de insanın psiko-sosyal yönden iyilik halini etkileyen öğelerden birisi olarak travma sonrası stres bozukluğu sosyal hizmetin alanlarından birisi olmasına rağmen yazılan tezlerin %3’ünün sosyal hizmet disiplininde yazılmış olması nedeniyle sosyal hizmet disiplininde yeteri kadar ilgi görmediği sonucuna varılmıştır ve sosyal hizmet disiplininde ruh sağlığı alanının bir alt çalışma alanı olarak travma sonrası stres bozukluğu konulu çalışmalara daha fazla ilgi gösterilmesi gerektiği değerlendirilmektedir.

ABSTRACT

Experiences that people go through in life can sometimes be so complex and mentally overwhelming that their coping skills are insufficient to deal with them. These experiences appear in various areas of life. When coping skills are inadequate, individuals are generally negatively affected. One of these negative effects is post-traumatic stress disorder (PTSD). Within the framework of PTSD, some academic studies are being conducted through postgraduate theses in higher education. The aim of this study is to investigate postgraduate thesis studies on PTSD using variables such as the level of the postgraduate program, language of writing, the university where the theses were produced, publication year, and distribution by discipline. A qualitative research method was employed in the study. A content analysis was performed on 380 theses available at the Higher Education Council Thesis Center. The theses were divided into three-year periods based on their publication years. According to the research findings, between 1998 and 2024 in Türkiye, the fewest theses on PTSD were written during 1998–2000, accounting for 1% (four theses), while the most were written during 2021–2024, accounting for 42% (160 theses). According to this research, PTSD began to be the subject of academic studies in Türkiye at the end of the 20th century. Thesis studies on PTSD were conducted in 92 out of Türkiye's 208 universities, with the highest number produced at Health Sciences Universities (including GATA) with 29 theses. The majority of the theses were written at the master's level (57%), while the fewest were written at the doctoral level (9%). Although PTSD is one of the factors that can impair mental health and affect an individual's psychosocial well-being, and even though it falls within the scope of social work, only 3% of the theses were written in the field of social work. This suggests that PTSD does not receive enough attention in the social work discipline, and it is recommended that more interest be directed toward studies on PTSD as a sub-area of mental health within social work.

ABSTRACT

The 2030 Agenda for Sustainable Development, adopted by the United Nations in 2015, outlines a global commitment to improving well-being and ensuring a healthy life for all. Goal 3: Ensure healthy lives and promote well-being for all at all ages focuses on reducing mortality rates, improving healthcare access, combating communicable and non-communicable diseases, and strengthening health systems worldwide. Achieving this goal requires countries to implement policies that promote universal healthcare, reduce health inequalities, and ensure access to quality health services for all individuals, regardless of age, gender, or economic status.

In Turkey, the Turkish Statistical Institute (TÜİK) publishes key health indicators that reflect the nation's progress in achieving SDG 3. These indicators cover areas such as maternal and child health, life expectancy, vaccination rates, access to healthcare services, and the prevalence of chronic diseases. Turkey has made notable improvements in reducing infant mortality, expanding vaccination programs, and providing universal health coverage. However, challenges persist, particularly in addressing health inequalities, expanding mental health services, and managing the rising burden of non-communicable diseases such as diabetes and cardiovascular conditions.

This paper presents an analysis of Turkey's health-related performance based on TÜİK data, highlighting both successes and areas in need of improvement. It also discusses policy recommendations and best practices to enhance healthcare accessibility, improve public health initiatives, and strengthen the healthcare system's resilience. Achieving SDG 3 will require a comprehensive approach that includes preventive care, equitable healthcare access, and strong public health policies. By addressing health disparities and improving healthcare infrastructure, Turkey can move closer to ensuring a healthier and higher-quality life for all its citizens.

Introduction

The 2030 Agenda for Sustainable Development, adopted by the United Nations in 2015, outlines a global commitment to improving well-being and ensuring a healthy life for all. Goal 3: Ensure healthy lives and promote well-being for all at all ages focuses on reducing mortality rates, improving healthcare access, combating communicable and non-communicable diseases, and strengthening health systems worldwide. Achieving this goal requires countries to implement policies that promote universal healthcare, reduce health inequalities, and ensure access to quality health services for all individuals, regardless of age, gender, or economic status.

In Turkey, the Turkish Statistical Institute (TÜİK) publishes key health indicators that reflect the nation's progress in achieving SDG 3. These indicators cover areas such as maternal and child health, life expectancy, vaccination rates, access to healthcare services, and the prevalence of chronic diseases. Turkey has made notable improvements in reducing infant mortality, expanding vaccination programs, and providing universal health coverage. However, challenges persist, particularly in addressing health inequalities, expanding mental health services, and managing the rising burden of non-communicable diseases such as diabetes and cardiovascular conditions.

This paper presents an analysis of Turkey's health-related performance based on TÜİK data, highlighting both successes and areas in need of improvement. It also discusses policy recommendations and best practices to enhance healthcare accessibility, improve public health initiatives, and strengthen the healthcare system's resilience. Achieving SDG 3 will require a comprehensive approach that includes preventive care, equitable healthcare access, and strong public health policies. By addressing health disparities and improving healthcare infrastructure, Turkey can move closer to ensuring a healthier and higher-quality life for all its citizens.

Maternal Mortality Rate

In line with the goal of reducing the global maternal mortality rate to below 70 per 100,000 live births by 2030, this indicator is defined as the number of maternal deaths per 100,000 live births in a given year. Maternal death is the death of a woman during pregnancy or within 42 days after the termination of pregnancy, regardless of the duration and location of the pregnancy, due to causes related to or aggravated by the pregnancy.

Table 1. Maternal Mortality Rate (per 100,000 live births)

Year	Rate
2010	16.7

2011	15.8
2012	15.2
2013	15.7
2014	15
2015	14.6
2016	14.7
2017	14.5
2018	13.5
2019	13
2020	13.1
2021	13.1

The maternal mortality rate decreased from 16.7 in 2010 to 13.1 in 2021. This trend can be attributed to improvements in prenatal care, access to healthcare services, and medical interventions during childbirth. Although slight increases were observed in 2013 and 2016, overall progress in maternal health has been positive. A more pronounced decline began in 2018, reaching its lowest level in 2019 (13.0), and the rate remained stable in 2020 and 2021.

Neonatal Mortality Rate

In line with the goal of reducing the neonatal mortality rate to at least 12 per 1,000 live births in all countries by 2030, this indicator represents the probability of a newborn dying within the first 27 full days of life.

Table 2. Neonatal Mortality Rate (per 1,000 live births)

Year	Rate
2010	8.2
2011	7.8
2012	8
2013	7.4
2014	7.9
2015	7.1
2016	6.7
2017	6.4
2018	6.5
2019	6.4
2020	6.1
2021	6.5
2022	6.4

The neonatal mortality rate (per 1,000 live births) showed a general decline from 8.2 in 2010 to 6.4 in 2022. Despite minor fluctuations, such as increases in 2012 and 2014, the overall trend indicates improvements in neonatal healthcare services and survival rates. The most significant decline occurred between 2014 and 2017, which may be linked to advancements in medical care, prenatal interventions, and public health policies.

Under-Five Mortality Rate

In line with the goal of reducing the under-five mortality rate to at least 25 per 1,000 live births in all countries by 2030, this indicator represents the number of deaths of children under five per 1,000 live births in a given year. It is calculated by dividing the number of under-five deaths in a given year by the number of live births in that year. In other words, it defines the probability of dying within the first five years of life.

Table 3. Under-Five Mortality Rate (per 1,000 live births)

Year	Rate
2010	16.3
2011	15.5
2012	14.9
2013	14.1
2014	14.2
2015	13.1
2016	12.6
2017	12
2018	12.1
2019	12.2
2020	11.4
2021	12
2022	12.1

The under-five mortality rate decreased from 16.3 per 1,000 live births in 2010 to 12.1 in 2022, reflecting improvements in healthcare services, nutrition, and living conditions. The most significant decline occurred between 2010 and 2016, followed by slight fluctuations in 2018, 2019, and 2022.

Ending Epidemics of AIDS, Tuberculosis, Malaria, and Neglected Tropical Diseases by 2030

Table 4. Number of AIDS Cases

Year	Cases
2010	73
2011	80
2012	97
2013	101
2021	103
2016	109
2015	123
2017	127
2014	131
2018	134
2019	139

The table presents the number of AIDS cases between 2010 and 2019. Overall, there has been an increase in cases, rising from 73 in 2010 to 139 in 2019. Between 2010 and 2013, the number of cases gradually increased, with a more rapid rise in 2017 and 2018. The highest number was recorded in 2014 (131 cases), followed by a decrease to 123 in 2015. In recent years, the rate of increase has slowed, suggesting that while cases continue to rise, the pace of growth has decelerated.

Table 5. Tuberculosis Incidence per 100,000 People

2017	14.6
2018	14.1
2019	13.5
2020	10.6
2021	10.7

This table illustrates the incidence of tuberculosis per 100,000 people in Turkey. A significant decline is observed, with the incidence dropping from 22.0 in 2010 to 10.7 in 2021. Between 2010 and 2019, the incidence consistently decreased, with a particularly sharp drop from 2010 to 2016. In 2020, the incidence fell to 10.6 but slightly increased in 2021. Overall, this trend reflects the impact of effective health policies, early diagnosis, strengthened treatment processes, and successful public health measures in controlling tuberculosis.

2017	0.1
2018	0.1
2019	0.1
2020	0.1
2021	0.1

The given table presents the incidence of hepatitis B in children under five per 100,000 people. According to the data, a significant downward trend in hepatitis B cases is observed. The incidence, which was 0.4 in 2010, steadily declined to 0.1 by 2021. A notable decrease occurred in 2014, bringing the incidence down to 0.2, and from 2017 onwards, the incidence remained stable. This reduction is likely due to the effectiveness of vaccination programs, increased access to healthcare services, and strengthened public health policies aimed at preventing the spread of hepatitis B. Given that hepatitis B has become rare among children under five during this period, it can be concluded that the implemented measures have been successful.

Table 7. Mortality Rate Due to Cardiovascular Diseases, Cancer, Diabetes, and Chronic Respiratory Diseases

2015	71.3
2016	70
2017	69.4
2018	68.9
2019	68.5
2020	64.3
2021	59.2

The given table presents the mortality rate due to cardiovascular diseases, cancer, diabetes, and chronic respiratory diseases. This rate, which was 73.6% in 2010, showed a continuous decline until 2021, decreasing to 59.2%. Between 2010 and 2019, the mortality rate gradually decreased, with a particularly notable decline in 2020 and 2021. This reduction can be attributed to improvements in healthcare services, advancements in early diagnosis and treatment methods, public health measures, and lifestyle changes. Additionally, the impact of the pandemic may have contributed to the rapid decline observed in 2020 and 2021. Overall, this table reflects the positive outcomes of successfully implemented healthcare policies and treatment strategies.

Table 8. Suicide Mortality Rate (per 100,000 Population)

Year	Male	Female	Total
2010	5.6	2.4	4
2011	5	2.2	3.6
2012	6.3	2.4	4.4
2013	6.2	2.3	4.3
2014	6.1	2.1	4.1
2015	6	2.3	4.1
2016	6.1	1.9	4

2017	6.1	1.8	3.9
2018	6.2	2	4.1
2019	6.5	1.9	4.2
2020	6.8	2.1	4.4
2021	7.7	2.2	5
2022	7.3	2.4	4.9

The given table presents suicide mortality rates in Turkey based on gender and the total population. In 2010, the overall suicide rate was 4 per 100,000 people, and this rate steadily increased to 4.9 by 2022. Suicide rates were higher among men and have consistently risen since 2010. The male suicide rate was 5.6 in 2010 and increased to 7.3 in 2022. This rise may be attributed to social, economic, and psychological factors. The increasing suicide rate in recent years highlights the need for greater attention to mental health issues and increased public awareness. Particularly, the higher suicide rates among men indicate that this group is at greater risk and that more preventive measures should be implemented in this area.

Table 9. Adolescent Birth Rate (per 1,000 Women Aged 15–19)

Year	Rate
2010	33.8
2011	32.1
2012	30.7
2013	28.9
2014	27.9
2015	25.8
2016	24.1
2017	21.8
2018	18.9
2019	16.9
2020	14.8
2021	13

The given table presents the adolescent birth rate per 1,000 women aged 15–19. In 2010, this rate was 33.8, and it continuously declined to 13 by 2021. This decrease can be attributed to efforts in preventing early marriages and births, rising education levels, improved access to healthcare services, and the effective implementation of family planning programs. The steadily decreasing fertility rate since 2010 indicates a decline in teenage motherhood and growing awareness of the importance of women's education. This trend can also be seen as a reflection of improvements in overall public health and well-being.

Table 10. Tobacco Use Rate Among Individuals Aged 15 and Over

Year	Rate
2010	43.5
2012	40.2
2014	47.4
2016	44.1
2019	44.8

2022	45.3
------	------

The given table presents the tobacco use rate among individuals aged 15 and over. In 2010, the rate was 43.5%, which dropped to 40.2% in 2012. However, it increased to 47.4% in 2014. Since 2016, the rate has stabilized around 44%, reaching 45.3% by 2022. Over the years, the tobacco use rate has remained relatively constant, despite efforts to reduce smoking through public health policies.

These findings indicate that, despite preventive measures, long-term reduction in tobacco use has not been achieved, and in some years, there have even been increases. The persistence of tobacco use rates highlights the need for more effective anti-smoking initiatives, particularly targeting younger populations to raise awareness about the risks of tobacco consumption.

Table 11. Coverage Rate of the Target Population with All Vaccines in the National Program

Yıl	Pentavalent Vaccine (DTP+IPV+Hib) 3 Doses (%)

2016	98
2017	96
2018	98
2019	99
2020	98
2021	95

The given table shows the coverage rate of the target population with the pentavalent vaccine (DTP+IPV+Hib) included in Turkey's national immunization program. In 2010, the vaccination rate was 97%, fluctuating between 97% and 98% from 2011 to 2013. Except for 2014, the rate remained generally high. In 2014, it dropped to 96%, but it increased again to 97% and 98% in 2015 and 2016, respectively. By 2019, the vaccination rate had reached 99%. However, it declined to 98% in 2020 and further dropped to 95% in 2021. This decrease may be attributed to the rise in vaccine hesitancy during the pandemic period.

These data indicate that Turkey has maintained a generally high pentavalent vaccination coverage, marking significant success in public health. However, the decline observed in 2021 may be attributed to external factors or challenges in healthcare access, warranting close monitoring. Overall, high vaccination rates reflect an effective health strategy in preventing infectious diseases within the community.

Table 12. Number of Physicians per 10,000 Population

Year	Rate
------	------

2010	16.7
2011	16.9
2012	17.2
2013	17.4
2014	17.5
2015	17.9
2016	18.1
2017	18.6
2018	18.7
2019	19.4
2020	20.5
2021	21.7

The given table shows the number of physicians per 10,000 population in Turkey. In 2010, this rate was 16.7, and it steadily increased until 2021, reaching 21.7. The consistent annual increase in the number of physicians indicates strengthened access to healthcare services and improvements in the healthcare system. Between 2010 and 2015, the number of physicians gradually increased, while after 2016, the growth rate accelerated, and in 2020, the increase in healthcare workers became more noticeable. The year 2021 marked the highest number of physicians per 10,000 population, which could be seen as a sign of positive steps taken to improve access to healthcare services. This growth reflects the successful results of investments in strengthening healthcare infrastructure and increasing the number of healthcare workers.

Conclusion

In conclusion, the health indicators in Turkey show significant improvements, particularly in recent years. Positive developments in health, such as the increase in AIDS cases, the decrease in tuberculosis incidence, the drop in adolescent fertility rates, and the stabilization of tobacco use, indicate the effective implementation of public health measures and health policies. However, the increase in suicide rates and the steady levels of tobacco use remain issues that need attention. Additionally, the success in preventing infectious diseases like tuberculosis and hepatitis B points to increased access to healthcare services and the widespread implementation of effective vaccinations.

The high coverage of the target population with the pentavalent vaccine is another example of successful health strategies. The increase in the number of physicians demonstrates further improvements in access to healthcare services and the strengthening of the healthcare workforce. Overall, Turkey's successes in healthcare reflect the positive impact of steps taken to increase the accessibility of healthcare services, raise health awareness, and enhance societal consciousness. However, in some areas, such as suicide rates and tobacco use, further measures should be considered.

FROM EDUCATION TO EMPLOYMENT: EXPLORING TURKEY'S PROGRESS TOWARD GENDER EQUALITY

PROF. DR. OGUZHAN ZENGIN

ABSTRACT

The United Nations' 2030 Agenda for Sustainable Development, adopted in 2015, provides a global roadmap for achieving a more just, equitable, and sustainable world. Among the 17 Sustainable Development Goals (SDGs), Goal 5: Achieve gender equality and empower all women and girls stands as a central pillar for social progress. This goal aims to eliminate gender-based discrimination, ensure equal opportunities, and promote women's active participation in economic, social, and political life. Achieving this goal is essential for fostering inclusive development and building more equitable societies.

In Turkey, the Turkish Statistical Institute (TÜİK) regularly publishes data on gender equality, providing valuable insights into the nation's progress and challenges. Indicators such as women's labor force participation, the gender pay gap, representation in decision-making roles, access to education, and the prevalence of gender-based violence offer a comprehensive picture of gender dynamics in the country. While Turkey has made notable strides in education and legal rights for women, significant disparities persist in employment, leadership roles, and protection from violence.

This paper analyzes Turkey's gender equality performance based on TÜİK's statistical findings and discusses their implications for policy development. The results suggest that while progress has been made, gender equality remains an urgent issue, particularly in the workforce and in leadership positions. The paper also examines effective strategies to further gender equality, including legislative reforms, empowerment programs, and gender-sensitive policies, all of which are necessary to close the gender gap and create a more inclusive society for all.

Introduction

The United Nations' 2030 Agenda for Sustainable Development, adopted in 2015, provides a global roadmap for achieving a more just, equitable, and sustainable world. Among the 17 Sustainable Development Goals (SDGs), Goal 5: Achieve gender equality and empower all women and girls stands as a central pillar for social progress. This goal aims to eliminate gender-based discrimination, ensure equal opportunities, and promote women's active participation in economic, social, and political life. Achieving this goal is essential for fostering inclusive development and building more equitable societies.

In Turkey, the Turkish Statistical Institute (TÜİK) regularly publishes data on gender equality, providing valuable insights into the nation's progress and challenges. Indicators such as women's labor force participation, the gender pay gap, representation in decision-making roles, access to education, and the prevalence of gender-based violence offer a comprehensive picture of gender dynamics in the country. While Turkey has made notable strides in education and legal rights for women, significant disparities persist in employment, leadership roles, and protection from violence.

This paper analyzes Turkey's gender equality performance based on TÜİK's statistical findings and discusses their implications for policy development. The results suggest that while progress has been made, gender equality remains an urgent issue, particularly in the workforce and in leadership positions. The paper also examines effective strategies to further gender equality, including legislative reforms, empowerment programs, and gender-sensitive policies, all of which are necessary to close the gender gap and create a more inclusive society for all.

Some key gender equality indicators

Table 1. Enrollment Rate of 5-Year-Old Girls

Year	%
2015	66.91
2016	70.02
2017	74.79
2018	74.78
2019	74.71
2020	58.17
2021	83.42
2022	87.19

The enrollment rate of 5-year-old girls in Turkey showed a steady increase between 2015 and 2019, rising from 66.91% to 74.71%. However, in 2020, most likely due to the impact of the COVID-19 pandemic, the rate dropped to 58.17%. In 2021, there was a rapid recovery, with the enrollment rate increasing to 83.42%. This increase can be explained by the measures taken post-pandemic and the promotion of early childhood education. In 2022, the rate reached its highest level at 87.19%, indicating the effectiveness of improvements in educational policies and awareness efforts.

Table 2. Graduation Rates of Women by Educational Level (%)

Year	Primary School	Secondary School	High School
2014	97.3	92.3	59
2015	97.8	92.3	60.8
2016	98.2	87.9	64.4
2017	98.2	89.1	67.1
2018	98.5	97.3	70.4
2019	98.5	97.5	72.9
2020	98.5	96.8	76
2021	98.4	96	79.6
2022	98.5	95.8	81.8

The data shows a general trend of increasing graduation rates among women in Turkey across various education levels. The primary school graduation rate has consistently remained above 97% since 2014, stabilizing at 98.5% in 2022. The middle school graduation rate was 92.3% in 2014-2015, but it dropped in 2016 (87.9%). However, since 2018, it has reached 97%, showing a strong recovery. After 2019, a slight decline has been observed. The most significant increase is in the high school graduation rate; in 2014, it was 59%, but by 2022, it had risen to 81.8%, marking a notable improvement. This increase can be explained by the encouragement of longer education for women, the expansion of compulsory education, and easier access to higher education. In particular, the rise in high school graduation rates demonstrates an improvement in women's education levels and positive developments in terms of equal opportunities.

Table 3. Ownership of Mobile Phones Among Women by Year

Year	%
2018	89.1
2019	90.2
2020	92.7
2021	93.7
2022	93.7
2023	95.8

The data reveals a steady increase in women's mobile phone ownership in Turkey over the years. In 2018, the ownership rate was 89.1%, and it continued to rise annually, reaching 92.7% in 2020 and 93.7% in 2021. In 2022, the rate remained stable, but in 2023, it increased to 95.8%, marking the highest level. This increase can be explained by the widespread access to mobile technologies, improvements in economic and social conditions, rising digital literacy, and the integration of smartphones into daily life. Women's greater integration into the digital world is considered a significant development that enhances their participation in social life by increasing access to communication, education, and employment opportunities.

Table 4. The Proportion of Women in Managerial Positions (%)

Year	Service Sector	Industry	Total
2012	17.9	10.2	14.4
2013	21.5	9.6	16.6
2014	19.2	11.4	15.5
2015	18.4	10.3	14.4
2016	22.6	9.8	16.7
2017	22.7	10.8	17.3
2018	22	9.3	16.3
2019	22.7	10.8	17.5
2020	24.6	12.2	19.3
2021	25.4	15.3	20.7
2022	24	15	19.6
2023	25.2	15.4	20.5

The data shows that the proportion of women in managerial positions in Turkey has generally increased over the years, despite some fluctuations. In the service sector, the percentage of women managers was 17.9% in 2012, rising to 25.2% in 2023, showing a steady upward trend in this area. In the industrial sector, the proportion was 10.2% in 2012, experiencing fluctuations in some years, but after 2020, a significant increase occurred, reaching 15.4% in 2023. Overall, the representation of women in managerial positions increased from 14.4% in 2012 to 20.5% in 2023. This increase indicates that women have become more active in the workforce, have taken on more leadership roles, and that progress has been made in gender equality. However, it is noteworthy that the proportion of women managers in the industrial sector remains relatively low and the progress has been slower compared to the service sector. It is important to continue supportive policies and institutional incentives to ensure more women occupy managerial positions.

Table 5. Proportion of women in the Turkish Grand National Assembly (%)

Year	%
2011	14.4
2012	14.4
2013	14.4
2014	14.4
2015	14.7
2016	14.7
2017	13.9
2018	17.3
2019	17.3
2020	17.3
2021	17.4
2022	17.3

2023	20,1
------	------

The data shows that the proportion of female members of the Turkish Grand National Assembly (TBMM) has followed a slow but generally increasing trend over the years. Between 2011 and 2016, the proportion remained steady with small fluctuations between 14.4% and 14.7%. However, in 2017, it dropped to 13.9%. In 2018, the proportion rose to 17.3%, showing a significant increase, and this proportion was maintained until 2022. In 2023, the proportion reached 20.1%, marking the highest level to date. This increase indicates that women are taking on more roles in politics and progress is being made toward gender equality. However, female representation has not yet reached the ideal level, and to further increase the proportion of women in TBMM, political parties must offer more support to female candidates, and policies promoting women's participation should be strengthened.

Conclusion

When examining data on the position of women in Turkish society, significant progress can be observed in various fields, from education to politics, from the workforce to technology. In education, graduation rates for women, especially at the high school level, have significantly increased, indicating that women are staying longer in the education process. In terms of technology access, the percentage of women owning mobile phones has steadily risen over the years, reflecting their increased integration into the digital world. In the workforce, the proportion of women in managerial positions has generally increased, although it remains lower in the industrial sector compared to the service sector. In politics, the proportion of female members in TBMM has made slow progress, reaching its highest level of 20.1% in 2023. Women's greater participation in education, technology, and the workforce has increased their representation in decision-making mechanisms, yet there are still areas such as industry and politics where sufficient progress has not been made. This highlights the need for continued supportive policies and incentive mechanisms to ensure that women have more opportunities in the workforce and politics.

ÖZET

Sosyal hizmet, herhangi bir sebeple tamamen ya da kısmen sosyal işlevselliğini yitiren birey ya da grupların; yeniden sosyal işlevselliğini kazanması, iyilik halinin artırılması ve beraberinde sosyal adaletin sağlanmasına yönelik çeşitli müdahaleler geliştirip uygulayan bir mesleki disiplindir. Sosyal hizmet, müracaatçı kitlesinin özelliklerine ve uygulama alanlarına göre alt disiplinlere ayrılmaktadır.

Sosyal hizmetin alt disiplinlerinden biri olan tıbbi sosyal hizmet, herhangi bir hastalıkla mücadele eden birey ve/veya yakınlarının; hastalık sebebiyle açığa çıkan psikososyal ve ekonomik sorunlarını tespit etmekte ve tespit ettiği sorunlara müdahaleler geliştirip uygulamaktadır. Tıbbi sosyal hizmet uygulamalarının, tedavi süreci zamana yayılan ya da bireylerin yaşam boyu uyumlanmalarını gerektirecek kronik hastalıklar özelinde geliştirildiği ve uygulandığı da görülmektedir.

Tıbbi sosyal hizmetin odağını kanser hastaları ve yakınlarına yönelttiği alanı onkolojik sosyal hizmettir. Kanser hastaları ve yakınları, onkolojik sosyal hizmet uygulamalarıyla hastalığın teşhis edildiği aşamada tanışmaktadır. Onkolojik sosyal hizmetin uygulayıcıları olan onkolojik sosyal hizmet uzmanları tarafından hasta ve yakınları tedavi sürecinin detayları, tedavi sürecinde karşılaşmaları olası problemler ve bu problemlerle baş edebilecekleri yöntemler hususunda bilgilendirilmektedir. İlerleyen süreçlerde onkolojik sosyal sosyal hizmet uzmanları yine tedavi sürecinde açığa çıkıp hasta ve yakınlarının kendi imkanlarıyla çözemedikleri sorunlarının çözümü için kaynaklarla buluşturmakta, hasta ve yakınlarının sosyal ilişkilerinin yanında psikolojik sağlıklarını da destekleyecek müdahale programları geliştirmekte ve uygulamaktadır. Bu çalışmada, örneklenen uygulamaların detaylarının sunulması amaçlanmaktadır.

ABSTRACT

Social work is a professional discipline that develops and implements various interventions for individuals or groups who have completely or partially lost their social functionality for any reason; regaining social functionality, increasing well-being and ensuring social justice. Social work is divided into sub-disciplines according to the characteristics of the applicant population and application areas.

Medical social work, which is one of the sub-disciplines of social work, identifies the psychosocial and economic problems of individuals and/or their relatives who are struggling with any disease; and develops and implements interventions for the problems identified. It is also seen that medical social work practices are developed and implemented in the context of chronic diseases whose treatment process takes time or requires lifelong adaptation of individuals.

Oncological social work is the field where medical social work focuses on cancer patients and their relatives. Cancer patients and their relatives meet oncological social work practices at the stage of diagnosis of the disease. Oncological social workers, who are the practitioners of oncological social work, inform patients and their relatives about the details of the treatment process, the possible problems they may encounter during the treatment process and the methods they can cope with these problems. In the following processes, oncological social workers bring patients and their relatives together with resources to solve the problems that arise during the treatment process and that they cannot solve with their own means, and develop and implement intervention programs to support the psychological resilience of patients and their relatives as well as their social relations. In this study, it is aimed to present the details of the exemplified practices.

1. GİRİŞ

Tarihsel süreçte sağlığın tanımı ve insanların sağlığa yönelik bakış açılarında birtakım değişimler yaşanmıştır. Söz konusu değişimler üzerinde Dünya Sağlık Örgütü'nün insan sağlığının biyolojik yönü olduğu kadar psikososyal yönünün de olduğunu vurgulaması, başka bir ifadeyle insanı biyopsikososyal bir varlık olarak nitelendirmesinin de etkisi bulunmaktadır. Bu nitelendirme ile birlikte, kişinin tam anlamıyla sağlıklı kabul edilebilmesi için fiziksel sağlığının yanında ruh sağlığının da korunup desteklenmesi ve sosyal destek mekanizmalarının işlevsel olmasının da gerekli olduğu düşüncesi benimsenmiştir. Benimsenen bu düşünce, insan vücudunda meydana gelen bir hastalığın medikal tedavisi aşamasında, iyileşmenin tüm boyutlarda gerçekleşebilmesi adına bireylerin psikososyal ve ekonomik olarak desteklenmesini gerekli kılmıştır. Bu gereklilik sosyal hizmetin sağlık hizmetlerindeki sunumu olarak değerlendirilen tıbbi sosyal hizmet alanının oluşumuna katkı sağlamıştır. (Şengül & Bulut, 2023, 95,96)

Tıbbi sosyal hizmet uygulamaları, herhangi bir sağlık kuruluşundan hizmet alan bireyler ve yakınlarının; hastalık ve tedavi süreciyle ilgili bilgilendirilmelerini, süreçte karşılaşmaları muhtemel problemlerin tespitini, mümkünse önlenmesini, önlenemediği noktada da çözüm odaklı müdahaleler geliştirip uygulanmasını içermektedir. Tüm bunlara ek olarak, yatarak tedavi gören hastaların taburculuk sonrasında gidebileceği bir yerin ya da hastaya bakım verecek bir yakınının varlığını değerlendirmek ve yokluğunda da çeşitli plan ve müdahalelerde bulunmak da tıbbi sosyal hizmetin kapsama alanına girmektedir (Zengin, 2011, 30,31).

Hasta ve yakınları için planlanan ve hayata geçirilen tıbbi sosyal hizmet uygulamalarının ana amacı, hasta ve yakınlarının tedavi sürecine uyumlarını desteklemektir. Bu destek sayesinde, hastalık ve tedavi süresince hasta ve yakınlarının yaşam kalitelerinin de desteklendiği bilinmektedir (Özbeşler, 2013, 9).

Türkiye'de tıbbi sosyal hizmet uygulamaları, 1964 yılında Sosyal Hizmet Akademisi'nde öğrenci olan bir grubun Ankara'da bir hastanede yaptıkları stajla başlamış olup günümüzde de devam etmektedir (Keleşoğlu et al., 2022, 102). Günümüzde tıbbi sosyal hizmet uygulamalarına ilişkin detaylar ve müracaatçı kitlesinin özellikleri, "Tıbbi Sosyal Hizmet Uygulama Yönergesi"nde (2011) açıkça belirtilmektedir. Bu yönergeye göre tıbbi sosyal hizmetin müracaatçı kitlesi arasında yaşam boyu sürececek ya da uzun süreli tedavi gerektirecek kronik hastalıklara sahip bireyler de bulunmaktadır.

Kronik hastalıklara sahip bireylerin tedaviden aldıkları verimin düştüğü, öz bakımlarını yapmakta güçlük çektikleri, sağlık ekibiyle iletişim problemleri yaşadıkları ve içerisinde buldukları aileleri başta olmak üzere bazı sosyal sistemlerle bağlarının zayıfladığı, başka bir ifadeyle sosyal izolasyon yaşadıkları noktada; sosyal hizmet müdahalesine gereksinim duydukları söylenebilmektedir (Sütçü, 2023, 55).

Sözü geçen kronik hastalıklara sahip bireyler arasında kanser hastaları da bulunmaktadır. Bilindiği gibi kanser, hücrelerin kontrolsüz biçimde çoğalması halidir ve bu hastalık son yıllarda giderek yaygınlaşmış durumdadır. Kanserin kilo kaybı, saç dökülmesi, iş hayatı ve sosyal ilişkilerde değişim, aile içi tutum ve rollerin değişimi gibi hem fiziksel hem de psikososyal değişimlere yol açması durumu söz konusudur (Işıkhana, 2021, 153). Kanser teşhisiyle birlikte özellikle hastalarda “psikolojik yıpranma, ekonomik kayıplar, toplumdan dışlanma hissi ve öz güvenini yitirme gibi sorunlar” ortaya çıkabilmektedir (Yıldırım, 2022, 216). Bu çerçevede kanser hastası bireyler ve yakınlarına yönelik tıbbi sosyal hizmet uygulamaları, onkolojik sosyal hizmet başlığı altında toplanmaktadır. Bu çalışmada onkolojik sosyal hizmet uygulamalarına ilişkin detayların sunulması amaçlanmaktadır.

2. ONKOLOJİK SOSYAL HİZMET

Kanser, çoğunlukla ölümlerle ilişkilendirilen ve organ, doku, yeti yitimine sebebiyet veren başlıca hastalıklardan biri olarak anılmaktadır. Kanser, yalnızca hasta birey için değil, ailesi başta olmak üzere dahil olduğu sosyal sistemlerin tümünde radikal, çoğunlukla olumsuz değişikliklere yol açmaktadır. Kanser hastası ve yakınlarının yaşamlarında psikososyal ve ekonomik alanda açığa çıkan bu olumsuz değişikliklerle baş etme noktasında onkolojik sosyal hizmet müdahalelerine gereksinim duyulmaktadır (Duyan, 2022, 78,79).

Kanserin tedavisinde ilaçla tedavi (kemoterapi), radyoterapi ve ameliyat olmak üzere üç temel müdahale yaklaşımı bulunmaktadır (Işıkhana, 2021, 157-158). 21. yüzyıl itibarıyla gelişen tedavi imkanları doğrultusunda kanserde sağ kalım oranlarında artış gözlemlenmektedir. Bu durum, taburculuk süreci ve sonrasında planlanmasının yanı sıra kanserin birey ve yakın sosyal çevresi üzerinde bıraktığı olumsuz etkinin azaltılmasında onkolojik sosyal hizmetin gerekliliğini ön plana çıkarmış olup gelişimini desteklemiştir (Keleşoğlu, 2022, 92).

Her ne kadar tedavi imkanlarında önemli gelişmeler olsa da kanser, hala ölüm neden ve istatistiklerinde önemli bir yer tutmaktadır. Dünya Sağlık Örgütü istatistiklerine göre 2020 yılında dünya genelinde yaklaşık 10 milyon ölümün (yaklaşık altı ölümden birinin) nedeninin kanser olduğu ifade edilmiştir. Meme, akciğer, kolon ve rektum kanserleri en sık görülen kanser türleri olmuştur (WHO, 2025).

Yukarıda değinildiği gibi kanser tedavisinde belli birtakım müdahale teknikleri bulunmakla birlikte hastalığın tedavi edilemeyecek bir noktaya gelmesinin ardından yardımcı intihar ve ötenazi seçenekleri de hasta ve yakınlarının gündemine gelmeye başlamaktadır. Yardımlı intihar ve/veya ötenazi kararı veren kişiye (hasta veya yakınları) öncesinde bu prosedürler hakkında kapsamlı bir bilgilendirme yapılması gerekmektedir. Yardımlı intihar ya da ötenazi prosedürünün uygulanması kararının ardından sürecin planlanması ve uygulanması da onkolojik sosyal hizmetin odağındadır.¹ Hastanın yardımcı intihar ve ötenazi ile ya da hastalığın doğal seyriyle hayatını kaybetmesinin ardından yaşanan yas sürecinde hasta yakınlarına

¹ Yardımlı intihar ve ötenazi prosedürlerinin Türkiye’de uygulama karşılığı bulunmamaktadır.

psikososyal destek sağlanması da onkolojik sosyal hizmetin uygulama alanına girmektedir (Keleşoğlu, 2022, 93).

2.1. Onkolojik Sosyal Hizmet Uzmanının Rol ve Sorumlulukları

Onkolojik sosyal hizmetin uygulayıcıları olan onkolojik sosyal hizmet uzmanları; kanser hastalığının çeşitleri, tedavi olanakları ve bu tedavi olanaklarını bünyesinde barındıran kurum / kuruluşların neler olduğuna; çeşitli kamu ya da sivil toplum kuruluşlarının kanser hastaları ve yakınlarına sağladığı desteklerin içerik ve niteliğine hakim olmalıdır. Bunun yanında gerçekleştirdiği müdahalelerin kuramsal alt yapısını kurabilecek düzeyde sosyal hizmet kuramlarını, duygu ve düşünce yönetimini gerçekleştirebilecek düzeyde de terapötik yöntemlerini bilmelidir. Sosyal hizmet uzmanı hastalığın türüne ve hasta bireyin/ailenin özelliklerine göre pozisyon alabilmelidir. Örneğin çocukluk çağı kanseri vakası ile yetişkin bir bireydeki mide kanseri vakasında farklı ihtiyaçlar ortaya çıkabileceğinin farkında olmalı ve bu tip farklılıklara hazırlıklı olmalıdır.

Onkolojik sosyal hizmet uzmanları; bireyin kanser teşhisi aldığı aşamada hasta ve ailesi için bir sosyal inceleme süreci başlatmalı, kapsamlı bir ihtiyaç analizi gerçekleştirmelidir. Bu aşamadan sonra sosyal hizmet uzmanı kanser tedavisinin başladığı süreçte hasta ve ailesinin sosyal işlevselliğini korumak ya da yeniden inşa etmek amaçlarıyla, bireysel ya da grup görüşmeleri sağlamalıdır (Acar, 2013, 232).

Her hastanın tedaviye aktif katılım hakkı mevcuttur. Hastalık ve tedavi sürecine dair detaylı bir bilgi almak, hasta ve yakınlarının süreci büyük bir bilinmezlik olarak görmesini engelleyecektir. Kanser gibi hayatın tüm alanlarını tehdit ettiği düşünülen bir hastalık söz konusu olduğunda, hasta ve yakınları süreci anlamlandırmakta zorlandıklarından detaylı bilgi alma gereksinimleri artacaktır. Bu noktada onkolojik sosyal hizmet uzmanları, sağlık ekibiyle hasta ve yakınları arasında bir köprü görevi görerek olası iletişim kopukluklarını en aza indirmelidir (Acar, 2013, 233).

Hasta ve hasta yakınlarıyla sağlık personelleri arasında yaşanan iletişim kopuklukları, hasta ve yakınlarının içinde buldukları duygu durumlarından ziyade sağlık personelinin hastalık ve tedavi sürecini aktarırken terminolojiyle zenginleştirilmiş bilimsel bir dil kullanması sebebiyle de yaşanabilmektedir. Bu noktada onkolojik sosyal hizmet uzmanının sorumluluğu hastalığa dair akademik bilgiyi gündelik, herkesçe anlaşılabilir sade bir dille aktarmaktır (Uğurlu, 2020, 1009 - 1013).

Hastalık ve tedavi sürecinde açığa çıkan ulaşım masrafları, ek ilaç ve takviye gıda masrafları, barınma masrafları, işten ayrılma, ücretsiz izne çıkma gibi sebeplerle hasta ve yakınları birtakım ekonomik sorunlarla karşı karşıya kalabilmektedir (Acar et al., 2013, 174 - 176). Bu noktada onkolojik sosyal hizmet uzmanları kaynaklarla buluşturucu rolünü üstlenmeli ve kişileri ekonomik destek sağlayacak kurum / kuruluşlara yönlendirmelidir (Çoban Kaynak, 2017, 253).

Onkolojik sosyal hizmet uzmanları; hasta ve yakınları için örneklenen müdahaleleri gerçekleştirirken müracaatçının ihtiyaç, inanç ve kararlarına saygı duymalı, hasta ve yakınlarının ait oldukları kültürel öğelere hakim olmalı, hastalığın tedavisi ve uygulanan psikososyal müdahalelerden memnuniyet durumunu sormalı, hasta ve yakınlarını doğru zamanda doğru şekilde bilgilendirmelidir (Karaağaç, 2022, 98).

2.2. Onkolojik Sosyal Hizmette Uygulama Örnekleri

Sosyal İnceleme ve Değerlendirme: Kanser hastaları ve yakınlarına yönelik olarak gerçekleştirilen onkolojik sosyal hizmet müdahalelerinin ilkidir. Onkolojik sosyal hizmet uzmanı bu aşamada, hasta ve yakınlarını tanımayı ve müracaatçıların hastalık ve tedavi sürecine uyumlarını güçleştirecek olası problemlerin analizini gerçekleştirir. Bunun yanında hastalık ve tedavi sürecinin detaylarına ilişkin bilgilendirmeler de yapan sosyal hizmet uzmanı, tedavi sürecinde kendilerinden alınabilecek destekler hakkında da bilgilendirmelerde bulunur (Acar, 2013, 232).

Kendine Yardım / Psikososyal Destek Grupları: Hasta ve/veya yakınlarından oluşturulan bu gruplarda, grup üyelerinin hastalık ve tedavi sürecinin detayları ve bu süreçte açığa çıkan problemlerin neler olduğu, bunun yanında bu problemlerle nasıl başa çıktıkları konuşulmaktadır. Grup üyelerinin “Yalnız değilim.” mesajını almasını amaçlayan bu gruplara eğitim seviyesi yüksek, genç, bekar ve kendini ifade etme gereksinimi duyan bireylerin katılım oranlarının daha yüksek olduğu bilinmektedir (Tuncay, 2010, 61 - 63).

Yas Danışmanlığı: Kanser sebebiyle yakınlarını kaybeden bireylerin yas sürecindeki ihtiyaçlarının analizi ve giderilmesi olarak özetlenebilecek kısa süreli müdahaleleri içermektedir (Alsancak & Sevilay Özaslan, 2022, 127).

Psikoeğitim: Psikoeğitim, yetişkin eğitimi temel ilkeleri etrafında şekillendirilen, yapılandırılmış ve didaktik özellikte bir müdahale programıdır. Hastalıklara yönelik olarak gerçekleştirilen psikoeğitimlerde hastaların sağlık durumuna verdikleri duygusal tepkiler ve baş etme becerileri konusunda bilgilendirilmesi amaçlanır. Bu sayede hasta ve yakınlarının tedavi sürecine uyumları desteklenir (Şengün et al., 2011, 66 - 68).

Kanser hastalarına yönelik olarak geliştirilen psikoeğitim uygulamalarının, hasta ve yakınlarının baş etme mekanizmalarını olumlu yönde etkilediği bilinmekle birlikte (Üzüm & Nehir, 2018, 78-80), psikoeğitim programlarının yapılandırılması ve uygulanması da onkolojik sosyal hizmet müdahaleleri arasında gösterilebilir.

Sosyoekonomik Destek: Hastalık ve tedavi sürecinde açığa çıkan ekonomik sorunların çözümü için toplumsal kaynakların harekete geçirilmesi, hasta ve yakınlarına ayni/nakdi destek sağlayan devlet ya da sivil toplum kuruluşlarına yönlendirme yapılması süreçlerini içermektedir (Acar et al., 2013, 174 - 176).

3. SONUÇ

Kanserin hastalık ve tedavi sürecinin yanı sıra tedavi sonrasında hasta kişi ve yakınları üzerindeki olumsuz etkisi değerlendirildiğinde, hastalığın yalnızca biyomedikal yönüne odaklanılarak tedavi edilmesinin yetersiz kalacağı kanaatine varılmıştır. Bu kanaat, hasta ve yakınlarının psikososyal ve ekonomik olarak da desteklenmelerinin önemine dikkat çekerek kanserin sosyal tedavisi olarak nitelendirilebilecek onkolojik tıbbi sosyal hizmet alanının oluşumuna hız kazandırmıştır.

Onkolojik sosyal hizmet, kanser hastaları ve yakınlarının hastalık sürecinde karşılaştıkları psikososyal ve ekonomik sorunların çözümüne yönelik uygulamalar geliştirip hayata geçiren, hastalık ve tedavi sürecine uyumlarının desteklenmesini sağlayan tıbbi sosyal hizmet alt disiplini içerisindeki bir uygulamaya sahiptir.

Onkolojik sosyal hizmet uygulamaları kapsamında onkolojik sosyal hizmet uzmanları; hasta ve yakınlarına bilgilendirme, hasta ve yakınlarıyla sağlık personelleri arasındaki iletişim kopukluklarının giderilmesi, psikososyal destek, psikoeğitim, sosyal inceleme, sosyoekonomik destek ve yas danışmanlığı süreçlerini yönetmektedir.

Onkolojik sosyal hizmet uzmanları, bu süreci yönetirken mesleki rolleri arasından bağlantı kurucu, savunucu ve vaka yöneticisi rollerini aktive etmektedir. Sosyal hizmet uzmanları vakalarla çalışırken kanser çeşitlerini ve hastaların/hasta yakınlarının özelliklerini göz önünde bulundurarak müdahaleler gerçekleştirmektedir.

IMPROVING MATERNAL HEALTH THROUGH MIDWIFERY-LED CARE MODELS: A GLOBAL PERSPECTIVE

Aisha Al-Harthy, Dr. Fatima Ibrahim , Dr. Elena Petrova

Saint Petersburg State University, Russia

Abstract:

Midwifery-led care models have gained significant recognition in improving maternal and neonatal health outcomes worldwide. This study examines various midwifery-led care models implemented across different regions and evaluates their effectiveness in reducing maternal mortality and morbidity rates. Using a systematic literature review, data from multiple healthcare systems were analyzed, with a focus on accessibility, patient satisfaction, and clinical outcomes. The results suggest that midwifery-led care models contribute to safer childbirth experiences, increased patient autonomy, and cost-effective maternal healthcare. The study concludes that integrating midwives as primary caregivers in maternity services enhances maternal and neonatal health, particularly in low-resource settings.

THE ROLE OF MIDWIVES IN PREVENTING POSTPARTUM DEPRESSION: A QUALITATIVE STUDY

Dr. Nawal Al-Mazroui, Dr. Layla Abdullahi

University of Nairobi, Kenya

Abstract:

Postpartum depression (PPD) remains a critical public health concern affecting maternal well-being and child development. This study explores the role of midwives in detecting and preventing PPD through early screening, counseling, and psychosocial support. A qualitative approach was employed, with in-depth interviews conducted among midwives working in maternity wards across Oman and Kenya. Findings indicate that midwives play a crucial role in identifying at-risk mothers and providing emotional and psychological support. The study recommends training midwives in mental health interventions to improve maternal psychological outcomes and reduce the prevalence of PPD.

INTEGRATING TRADITIONAL MIDWIFERY PRACTICES INTO MODERN MATERNAL CARE IN SUB-SAHARAN AFRICA

Esther Mwangi , Dr. Safiya Hassan

University of Ghana, Ghana

Abstract:

Traditional midwifery practices have been an essential part of maternal healthcare in Sub-Saharan Africa for centuries. This study investigates the integration of traditional birthing techniques with modern obstetric care to improve maternal and neonatal health outcomes. Through ethnographic research, the perspectives of traditional midwives and hospital-based healthcare professionals were examined. Findings suggest that a hybrid approach that respects cultural practices while incorporating evidence-based medical care can lead to better maternal health outcomes. The study concludes with policy recommendations for enhancing collaboration between traditional midwives and healthcare institutions.

MIDWIFERY EDUCATION AND SKILL DEVELOPMENT: CHALLENGES AND OPPORTUNITIES IN THE MIDDLE EAST

Dr. Laila Al-Kindi (University of Muscat, Oman),

Dr. Mohammed Al-Farsi (University of Jordan, Jordan)

Abstract:

Midwifery education plays a crucial role in ensuring high-quality maternal care. This study explores the challenges and opportunities in midwifery training programs in the Middle East, focusing on curriculum development, clinical training, and professional accreditation. Through surveys and interviews with midwifery educators and students, key barriers such as limited hands-on training opportunities, regulatory constraints, and cultural perceptions of midwifery were identified. The study highlights best practices from successful midwifery programs and suggests reforms to enhance midwifery education, ultimately improving maternal and newborn health outcomes.

TECHNOLOGY-ASSISTED MIDWIFERY: TELEHEALTH SOLUTIONS FOR REMOTE MATERNAL CARE

Assoc. Prof. Dr.Natasha Ivanova

University of Baghdad, Iraq

Abstract:

The integration of telehealth technologies in midwifery has transformed maternal healthcare, particularly in remote and underserved areas. This study assesses the effectiveness of telehealth solutions in providing prenatal consultations, remote monitoring, and emergency maternal care. A mixed-methods approach was used to analyze data from telehealth programs in the Middle East and Eastern Europe. Results indicate that telehealth enhances accessibility to skilled midwifery care, reduces maternal complications, and improves health education among pregnant women. The study emphasizes the need for policy support and infrastructure development to maximize the benefits of digital healthcare in midwifery.

MIDWIFERY INTERVENTIONS IN REDUCING CESAREAN SECTION RATES: A SYSTEMATIC REVIEW

Dr. Sara Abdulwahab , Dr. Youssef El-Masri

American University of Beirut, Lebanon

Abstract:

The global increase in cesarean section (C-section) rates has raised concerns about its long-term maternal and neonatal implications. This study systematically reviews midwifery-led interventions aimed at reducing unnecessary C-sections. Data were extracted from randomized controlled trials and observational studies conducted in the Middle East and North Africa. Findings reveal that midwifery-led prenatal education, labor support, and evidence-based decision-making contribute to reducing non-medically indicated C-sections. The study calls for policy reforms to strengthen midwifery-led models of care to ensure safer childbirth experiences.

MATERNAL HEALTH DISPARITIES AMONG MIGRANT WOMEN: THE ROLE OF MIDWIFERY SERVICES

Phd. Candidate Maria Fernández

University of Seville, Spain

Abstract:

Migrant women face significant barriers in accessing quality maternal healthcare, leading to disparities in birth outcomes. This study examines the role of midwifery services in addressing maternal health inequalities among migrant populations. Using a comparative analysis of healthcare systems in Oman, Spain, and Egypt, the research highlights the impact of language barriers, cultural differences, and healthcare accessibility on maternal outcomes. Findings suggest that culturally sensitive midwifery services, community outreach programs, and policy interventions can bridge the healthcare gap for migrant mothers. The study advocates for the expansion of midwifery-led maternal care programs tailored to migrant populations.

THE ROLE AND SIGNIFICANCE OF INTERVENTION RESEARCH IN SOCIAL WORK

Prof. Dr. João Henrique Silva

University of Bucharest, Faculty of Sociology and Social Work, Bucharest, Romania

Abstract

Intervention research plays a crucial role in advancing the field of social work by providing evidence-based solutions to social issues. This type of research focuses on developing, implementing, and evaluating interventions that aim to improve the well-being of individuals, families, and communities. Through systematic assessment and empirical analysis, intervention research ensures that social work practices are effective, ethical, and responsive to the needs of diverse populations.

A key aspect of intervention research is its ability to bridge the gap between theory and practice. By integrating qualitative and quantitative methodologies, researchers can develop comprehensive intervention models that address social problems such as poverty, domestic violence, child welfare, and mental health issues. Additionally, intervention research fosters collaboration between academic institutions, social work practitioners, and policymakers, ensuring that findings are translated into practical strategies.

Another significant advantage of intervention research is its adaptability to different cultural and socio-economic contexts. By employing participatory approaches, researchers can involve beneficiaries in the research process, making interventions more relevant and sustainable. Moreover, ethical considerations, such as informed consent and confidentiality, are essential in maintaining the integrity of social work research.

In conclusion, intervention research is fundamental to the development of social work as a profession and discipline. It enhances the effectiveness of social programs, informs policy decisions, and promotes social justice. Future research should focus on interdisciplinary collaborations and innovative methodologies to further strengthen the impact of social work interventions.
